

Hillsboro Inlet, Florida

<u>Date(s)</u>	<u>Construction and Rehabilitation History</u>
1930	Natural inlet with rock structure built to protect lighthouse.
1965	Authorized Federal project. Work included improvements for beach erosion control in Broward County, and a combined beach erosion and navigation improvement to Hillsboro Inlet and the shore south to Port Everglades. Navigation features include a channel 8 ft deep by 100 ft wide from the Intracoastal Waterway to a point 1,500 ft seaward of Hillsboro Inlet.
1966	North jetty constructed of rock on natural reef; a gap in the north jetty functions as a weir for the deposition basin inside the jetty.
